## Amendments to the Claims

This listing of claims will replace all prior listings of claims in the application.

## Listing of Claims

- 1. (Currently Amended) A method for the manufacture of an ester by transesterification in which comprising the step of bringing a starting material ester and an alcohol are brought into contact with a catalyst comprising (A) an amorphous zirconium oxide and (B) anat least one oxide selected from the group consisting of Group III element, analuminum oxide of Group V element, and/or anphosphorus oxide of Group IV element other than zirconium and hafniumtitanium oxide.
- 2. (Currently Amended) The method for the manufacture of an ester according to claim 1, wherein the starting material ester in a liquid-phase state and an alcohol in a vapor-phase state are brought into contact with a solid acid catalyst comprising said components (A) and (B).
- 3. (Currently Amended) The method for the manufacture of an ester—according to claim 1, wherein the starting material ester is an oil or fat, and the alcohol is methanol or ethanol.
- 4. (Currently Amended) The method for the manufacture of an ester—according to claim 1, wherein the content of the amorphous zirconium oxide in the catalyst is 40 to 90 wt.% and the Group IV element oxide is content of the contained in an amount of is 60 to 10 wt.% in the catalyst.
  - 5. (Canceled)

- 6. (Currently Amended) The method for the manufacture of an ester—according to claim 1, wherein the total content of the exides of Group III elementaluminum oxide and Group V elementthe phosphorus oxide is, calculated as their elements, 0.5 wt.% or more based on the zirconium element weight, and the content of the amorphous zirconium oxide is 10 to 99 wt.% based on the catalyst weight.
- 7. (Currently Amended) The method for the manufacture of an ester according to claim 1, wherein the crystallization temperature of the amorphous zirconium oxide is  $450\,^{\circ}\text{C}$  or higher.
- 8. (Currently Amended) The method for the manufacture of an ester according to claim 1, wherein the Group III element exide in the eatalyst is aluminum exide, and the content of the aluminum oxide is, calculated as the element, 40 to 1 wt.% based on the zirconium element weight.
- 9. (Currently Amended) The method for the manufacture of an ester according to claim 1, wherein the Group V element exide in the catalyst is phosphorus exide, and the content of the phosphorus exide is, calculated as the element, 8 to 0.8 wt.% based on the zirconium element weight.
- 10. (New) The method according to Claim 1, wherein the starting material ester is a glyceride ester of a saturated or unsaturated aliphatic carboxylic acid having from 8-24 carbon atoms.
- $11. \hspace{0.5cm} \hbox{(New)} \hspace{0.5cm} \hbox{The method according to Claim 1, wherein the catalyst comprises phosphorus oxide.}$
